The following is the recommended reference designs when using SQ7101/SQ7103 products. If the relevant pin are used, please refer to the corresponding suggestions:

Note: The 0.1uF near the IC (VDD) in the above figure should be as close to the IC as possible

3. Electrical Characteristics

3.1 Absolute Maximum Ratings

The absolute maximum ratings are rated values which must not be exceeded during operation, even for an instant. Any one of the ratings must not be exceeded. If any absolute maximum rating is exceeded, a device may break down or its performance may be degraded, causing it to catch fire or explode resulting in injury to the user. Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded

(V_{SS} = 0V)

Parameter	Symbol	Pins	Ratings	Unit
