1.Preface

SQ7131/SQ7133 supports many hardware cryptographic accelerators: embedded high-quality TRNG (True Random Number Generator), SHA-256, asymmetric encryption ECC-384/ECC-256, and symmetric encryption AES-128/AES-256. It also has secure storage for ECC and AES keys storage.

The device is suitable for building high-security applications, such as IoT symmetric/asymmetric authentication, attestation, TLS1.2/1.3 secure connections, secure boot, secure OTA, and F/W protection, etc.

Secure storage for ECC and AES keys:

3. Electonic Characteristics

3.1 Absolute Maximum Ratings

The absolute maximum ratings are rated values which must not be exceeded during operation, even for an instant. Any one of the ratings must not be exceeded. If any absolute maximum rating is exceeded, a device may break down or its performance may be degraded, causing it to catch fire or explode resulting in injury to the user. Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded.
